

Tailwind CSS Flexbox Cheat Sheet

DISPLAY

flex

block-level flex container

inline-flex

inline flex container, flows with text

FLOW DIRECTION

`flex-[...]` defines the main axis (= flow direction) and cross axis (= perpendicular to flow direction).

flex-row

flex-row-reverse

flex-col

flex-col-reverse

WRAPPING

flex-no-wrap

flex-wrap

flex-wrap-reverse

SHORTHANDS

flex-initial

can shrink, won't grow (grow-0 shrink-1 basis-auto)

flex-1

equal size, ignores content (grow-1 shrink-1 basis-0)

flex-auto

equal size, respects content (grow-1 shrink-1 basis-auto)

flex-none

fixed size (grow-0 shrink-0 basis-auto)

ITEM SIZING

grow-0

does not expand

grow

expands to fill space

shrink-0

does not shrink

shrink

shrinks to fit space

basis-auto

starts at content size

basis-0

starts at zero size

OTHERS

order-first

moves before all items

order-last

moves after all items

order-[...]

moves to specific position [...], default 0

JUSTIFY CONTENT

`justify-[...]` aligns the items along the **axis** of the flex.

justify-start

justify-center

justify-end

justify-between

equal spaces between items

justify-around

equal spaces around items (doubles gaps between)

justify-evenly

all spaces are identical

ALIGN ITEMS

`items-[...]` aligns **each item** along the **cross axis** of the flex.

items-start

items-center

items-end

items-stretch

fills cross axis (requires h-auto/w-auto on children)

items-baseline

ALIGN SELF

`self-[...]` aligns **a single item** along the **cross axis** of the flex.

self-auto

follows the parent

self-start

self-center

self-end

self-stretch

self-baseline

(this needs multiple items to work)

ALIGN CONTENT

`content-[...]` aligns all items of a row/column together along the **cross axis** of the flex.

content-stretch

content-start

content-center

content-end

content-between

equal spaces between lines

content-around

equal spaces around lines (doubles gaps between)

content-evenly

all spaces are identical
